# Introduction

## Purpose

This report is designed to provide insight into your preferences, attitudes and personal characteristics, and how they relate to your behavior, primarily in professional settings. It is organized around six Styles and fifteen Aspects of personality. Each Style and Aspect provides insight into your approaches as assessed by AMSA's Self-Awareness Assessment Instrument. Each of the Styles and their Aspects, along with your results and the implications of your scores, are described in greater detail below.

## Cautions

Your results should be considered in the context of other available information. It is important not to over-emphasize any one specific statement or conclusion. When examining the report, consider the pattern of strengths and improvement opportunities across the personality Aspects presented, and review feedback you have received from other sources. Although individual personality tends to be relatively static and stable across an individual's lifespan, certain identified Aspects of personality can vary and shift over time for a variety of reasons. In addition, the display of specific behaviors in professional settings is also a function of situations and contexts, which also can change over time. Therefore, it is important not to rely on results which have become dated.

## Interpretation

Personality traits are best interpreted on a continuum. Low scores and high scores are neither inherently good nor bad. Both low and high scores have beneficial and undesirable implications for behavior. While scores reflect a likelihood of displaying certain behaviors, remember it is possible to compensate for improvement opportunities through development, experience and coaching.

Interpretation of personality scores requires a comparison to others. In this report, the scores for each Aspect are communicated on a standardized nine-point scale called a stanine. As illustrated below, most people will tend to fall toward the middle of the stanine continuum on many Aspects, but will likely have higher or lower scores for some Aspects.

Each of the fifteen Aspects is presented with a single, short description, along with descriptions at each end of the continuum. The darker box on the graph represents your exact stanine and the lighter boxes to either side indicate the possible range of your score. For example, the graph below indicates a stanine of 2 and a possible range of scores of 1 to 3.

2

Aspect: A short aspect description

To interpret your results, start by reviewing your overall Styles. Then proceed to the detail for each of the Aspects that constitute those Styles.

## **Model of Personality**

The Personality Model used as a foundation for this assessment is firmly grounded in the well-established and empirically supported Five Factor Model (at times referred to as the Big Five). Elements of each of the traditional concepts of Extroversion, Emotional Stability, Agreeableness, Conscientiousness, and Openness to Experience are directly represented across ten of the fifteen Aspects of the model. The remaining five Aspects reflect traits critical for successful professional performance, particularly in leadership roles, but not captured in the traditional Five Factor Model. These additional five Aspects were taken from the latest literature on authentic leadership, learning theories, and positive psychology.

## **Normative Group**

The selection of an appropriate normative group is important for accurate interpretation of personality results. The choice of which is based on a number of factors including cultural elements and the intended use of the report. This report is based on Professionals and Managers in the U.S. As physicians occupy a space in the top tiers of the health care hierarchy, it is important to explore individual student potential, as well as behaviors, from this perspective.

## **American Medical Student Association**

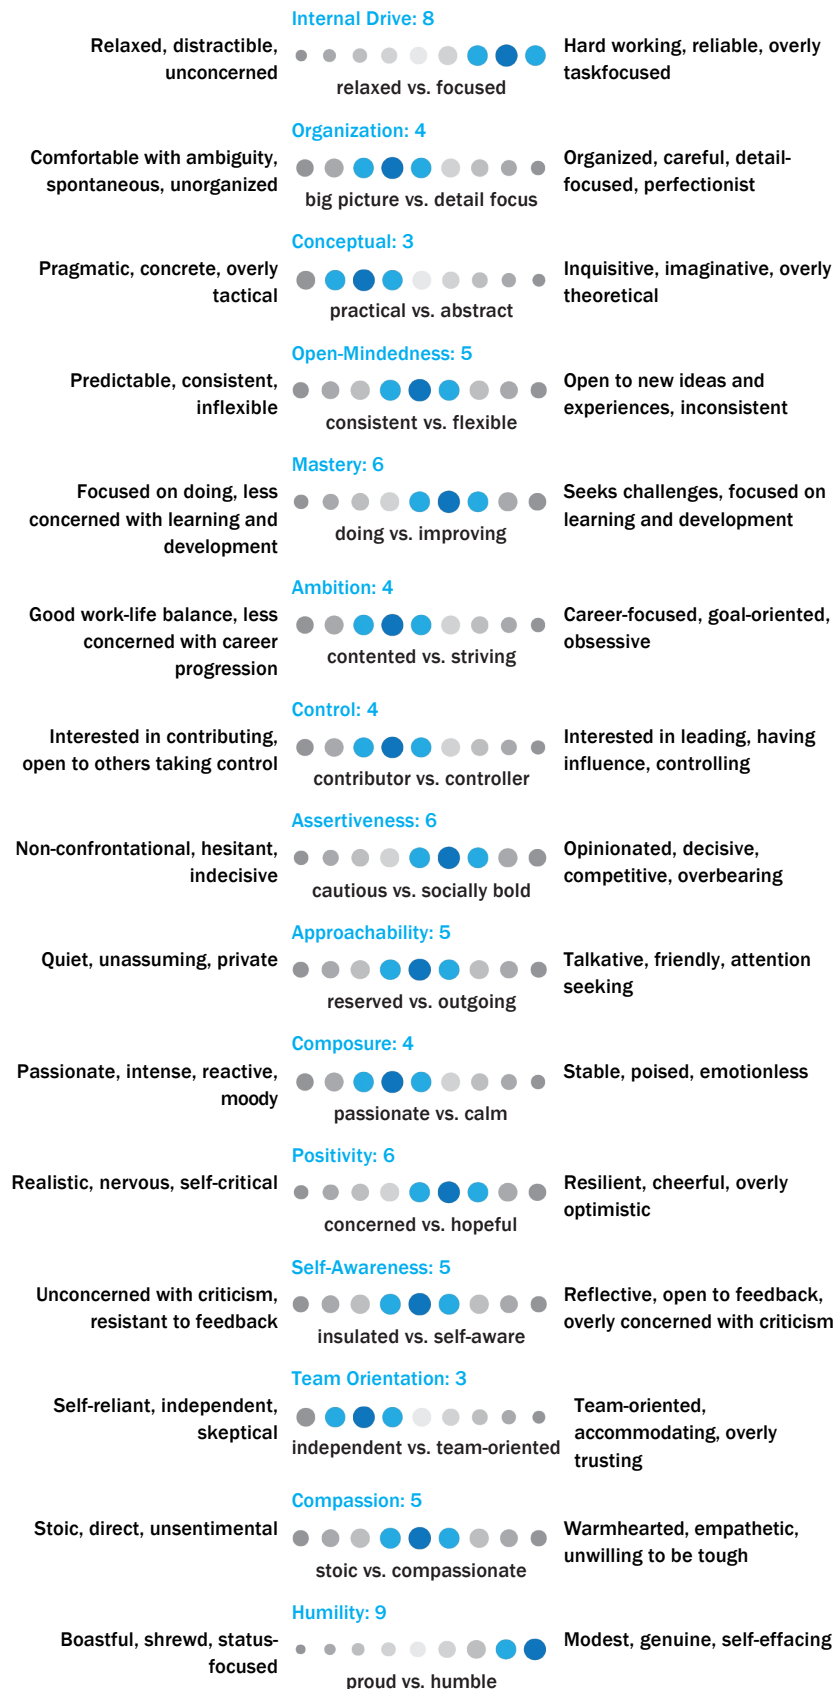

AMSA is a student-governed, national organization committed to representing the concerns of physicians-in-training. AMSA members are medical students, premedical students, interns, residents and practicing physicians. Founded in 1950, AMSA continues its commitment to improving medical training and the nation's health. This self-awareness assessment represents one part of AMSA's commitment to assisting future physicians realize their full potential and grow their skill sets in areas not typically addressed in medical schools. The assessment is specifically focused on traits critical for medical students, and is but one tool offered by AMSA to assist physicians-in-training in their professional development and well-being.

# Aspect Summary

## Aspect Profile

Stanine scores on each of the fifteen Aspects of personality are summarized in the table below.

# Task Style

6.0

## Summary

The Task Style is a broad measure of conscientiousness capturing one's approach to duties, responsibilities, and getting things done. Your results on the Internal Drive aspect suggest a strong tendency to see things through to completion. However, when combined with a lower Organization score, a tendency may appear to err toward completing tasks rather than ensuring they are done perfectly. You may also find yourself comfortable bending rules to get things done. With very high Organization you may find yourself getting lost in the details, and you may lose sight of the bigger picture of how those tasks fit into company strategy and broader goals.

8

## Internal Drive: relaxed vs. focused

Relaxed, distractible,  
unconcerned

Hard working, reliable,  
overly task-focused

People who fall within this range of the Internal Drive scale may be seen as:

- Very deadline-oriented
- Highly focused on accomplishing tasks and meeting deadlines
- Highly dependable
- Motivated when working on challenging assignments
- Overly focused on tasks and getting things done
- Usually preferring to focus on one goal or task at a time, without interruptions

4

## Organization: big picture vs. detail focus

Comfortable with ambiguity,  
spontaneous, unorganized

Organized, careful, detail-  
focused, perfectionist

People who fall within this range of the Organization scale may be seen as:

- Equally mindful of specifications and purpose
- Skillful in using systematic and calculated methods to accomplish assignments
- Preferring to be organized, but tending to be less so during stressful periods
- Easily succumbs to peer pressure even if it involves deviant behavior
- Developing structured plans, but not always sticking to them
- Occasionally missing some critical details in their work

# Adaptation Style

4.7

## Summary

Adaptation Style relates to a person's openness to experience and approach to learning and adapting to situations. Your results suggest a tendency toward a pragmatic approach to problem solving rather than a more theoretical approach. A lower Open-Mindedness score may also indicate a high degree of consistency in your behaviors but also suggests you may be less willing to consider new ideas. A higher Open-Mindedness score suggests you can be too willing to try different approaches without considering their long-term implications. Finally, consider the impact of Mastery and how this influences how you prefer to adapt to situations.

3

## Conceptual: practical vs. abstract

Pragmatic, concrete, overly tactical

Inquisitive, imaginative, overly theoretical

People who fall within this range of the Conceptual scale may be seen as:

- Very pragmatic in their approach to things
- Thinking in a way that is practical and viewing the world as straightforward
- Favoring objective and explicit challenges as opposed to vague complexities
- More comfortable focusing on execution and immediate issues
- Showing little curiosity about broad theoretical or abstract issues

5

## Open-mindedness: consistent vs. flexible

Predictable, consistent, inflexible

Open to new ideas and experiences, inconsistent

People who fall within this range of the Open-Mindedness scale may be seen as:

- Open-minded about some topics, but firm in opinions and beliefs about others
- Willing to change and adapt as long as there is a compelling reason for it
- Acceptant of original proposals, however does not explore for them
- Flexible, but generally preferring that things remain the same
- Preferring trusted approaches as long as they continue to work reasonably well
- Reluctant to change plans or approaches at the last minute

6

## Mastery: doing vs. improving

Focused on doing, less concerned with learning and development

Seeks challenges, focused on learning and development

People who fall within this range of the Mastery scale may be seen as:

- Preferring to leverage existing strengths, but willing to develop new ones as well
- Presuming that human capacities are hard to change, yet a few abilities can be created through diligent work, preparing, and instruction
- Interested in helping talented individuals learn and develop
- More intrigued by self-improvement when there is a likelihood for payoff
- Hesitant to test arduous options when there is a great potential of disappointment

# Achievement Style

4.0

## Summary

Need for achievement, including focus on career goals and influence over others is captured by Achievement Style. Your results suggest you are likely to strive for a balance between your career and your personal goals and interests. While you are willing to take control of situations, at times, you may let others with greater desire for leadership and control take the lead in some situations. When considering future leadership roles that come with greater time commitments, be sure to carefully consider whether you will feel comfortable taking on additional authority and responsibilities.

4

## Ambition: contented vs. striving

Good work-life balance, less concerned with career progression

Career-focused, goaloriented, obsessive

People who fall within this range of the Ambition scale may be seen as:

- High appraisal of work-life equalization
- Interested in promotions and achieving career goals, but reluctant to sacrifice personal goals to achieve them
- Motivated to achieve good results, however not stressed over being exceptional
- Preferring a balance of both achievable and challenging objectives
- Generally holding themselves and others to high standards, although willing to compromise at times

4

## Control: contributor vs. controller

Interested in contributing, open to others taking control

Interested in leading, having influence, controlling

People who fall within this range of the Control scale may be seen as:

- Inclined to undertake management responsibilities, yet a cooperative team player
- Comfortable leading by example or through direct authority
- Able to be directive and controlling when necessary
- Preferring to lead a smaller team as opposed to a larger one
- Not emphatically propelled by collecting power and impact
- Willing to giving others a chance to lead in troublesome circumstances or when extreme choices should be made

# Interaction Style

5.5

## Summary

Interaction Style is a broad measure of extraversion that describes how much you seek out interaction with others and how you prefer to engage with them. Your results suggest you enjoy sharing and debating your opinions, as long as the conversation doesn't become too adversarial. Further, you may be gregarious at times, especially with people you know well, as long as the conversation stays light and enjoyable and avoids topics where people strongly disagree with each other.

6

## Assertiveness: cautious vs. socially bold

Non-confrontational,  
hesitant, indecisive

Opinionated, decisive,  
competitive, overbearing

People who fall within this range of the Assertiveness scale may be seen as:

- Comfortable imparting insights they feel unequivocally about
- Getting a charge out of rivalry and level headed discussion once it doesn't get angry
- Willing to shift suppositions or choices if emphatically tested
- Sometimes reluctant to challenge others' opinions or express disagreement, but generally willing to do so when necessary
- To some degree uneasy pushing for disagreeable standpoints or choices

5

## Approachability: reserved vs. outgoing

Quiet, unassuming, private

Talkative, friendly, attention  
seeking

People who fall within this range of the Approachability scale may be seen as:

- Ordinarily extroverted in social circumstances
- Excited or even goofy now and again, however more earnest at other times
- Comfortable working independently, but also enjoys social interaction at work
- Preferring not to be the center of attention in many situations, but enjoying it occasionally
- Socially confident in most situations but sometimes more reserved when interacting with people they do not know well

# Emotional Style

5.0

## Summary

Your Emotional Style describes how you experience and react to feelings and your degree of self-awareness. Your results suggest you are generally calm but may sometimes experience anxiety in stressful situations. At times, you may jump to conclusions, but generally maintain a balanced perspective about the likelihood of the worst versus the best case scenarios. Consider also how your degree of Awareness may help or hinder your approach to intense or frustrating situations.

4

## Self-Control: passionate vs. calm

Passionate, intense, reactive,  
moody

Stable, poised, emotionless

People who fall within this range of the Self-Control scale may be seen as:

- In contact with sentiments and feelings, however by and large ready to hold them within proper limits
- Copes with everyday problems, but sometimes more reactive with complex ones
- Normally passive in contentions, however once in a while irascible or bad tempered
- Generally relaxed, but sometimes tense or nervous in unfamiliar situations
- More irritable with tight deadlines or unforeseen challenges

6

## Positivity: concerned vs. hopeful

Realistic, nervous, selfcritical

Resilient, cheerful, overly  
optimistic

People who fall within this range of the Positivity scale may be seen as:

- Mindful of both the constructive and counterproductive parts of individuals and circumstances
- For the most part idealistic and confident about what is to come, additionally reasonable
- Usually realistic and accurate when making promises
- Able to overcome negative feelings and concerns with support from others
- Often resilient in the face of setbacks, but can become anxious and self-critical when under stress

5

## Self-Awareness: insulated vs. self-aware

Unconcerned with criticism,  
resistant to feedback

Reflective, open to feedback,  
overly concerned with  
criticism

People who fall within this range of the Self-Awareness scale may be seen as:

- Considers others opinions, however just up to a specific point
- Typically impervious to unreasonable or wrong feedback
- Generally aware of how their behavior impacts others, but sometimes surprised at others' reactions
- Interested in feedback, but not always actively seeking it out
- Mindful of qualities and shortcomings, yet may be unaware of some

# Teamwork Style

5.7

## Summary

Teamwork Style is a broad assessment of agreeableness that describes how you approach relationships and how focused you are on the needs of others. Your results suggest you tend to prefer relying on yourself rather than trusting or accommodating others. A lower Compassion score would suggest, you may at times be perceived as overly direct or unsympathetic toward people that you don't trust. A higher Compassion score, however, would suggest that while you may be reluctant to fully accommodate others' needs, you tend to be understanding of them. Finally, consider how your degree of Humility may impact how coworkers perceive you.

3

## Team Orientation: independent vs. team-oriented

Self-reliant, independent, skeptical

Team-oriented, accommodating, overly trusting

People who fall within this range of the Team Orientation scale may be seen as:

- Preferring self motivating work, opting to work autonomously
- Unrealistic to be exploited by others
- Preferring to solve own problems rather than asking for help
- Skeptical of others and their motives, hesitant to trust
- At times, disagreeable, impatient, and uncooperative with others

5

## Compassion: stoic vs. compassionate

Stoic, direct, unsentimental

Warmhearted, empathetic, unwilling to be tough

People who fall within this range of the Compassion scale may be seen as:

- Generally kind and forgiving toward people they know well
- Aware of the emotional side of situations, but not overly influenced by it
- Unsympathetic to misfortunes perceived to be caused by poor decisions
- Tolerant of others' differences and flaws, but less so under stress
- Able to give troublesome input notwithstanding when to some degree uncomfortable

9

## Humility: proud vs. humble

Boastful, shrewd, status-focused

Modest, genuine, selfeffacing

People who fall within this range of the Humility scale may be seen as:

- Sincere, open, and honest with others
- Extremely humble and reluctant to assume individual acknowledgment for achievement
- Not very motivated by achieving social status
- Uncomfortable engaging in political maneuvering
- Less compelling in promoting for own imperatives
