# Introduction

## Purpose

This report is designed to provide insight into your preferences, attitudes and personal characteristics, and how they relate to your behavior, primarily in professional settings. It is organized around six Styles and fifteen Aspects of personality. Each Style and Aspect provides insight into your approaches as assessed by AMSA's Self-Awareness Assessment Instrument. Each of the Styles and their Aspects, along with your results and the implications of your scores, are described in greater detail below.

## Cautions

Your results should be considered in the context of other available information. It is important not to over-emphasize any one specific statement or conclusion. When examining the report, consider the pattern of strengths and improvement opportunities across the personality Aspects presented, and review feedback you have received from other sources. Although individual personality tends to be relatively static and stable across an individual's lifespan, certain identified Aspects of personality can vary and shift over time for a variety of reasons. In addition, the display of specific behaviors in professional settings is also a function of situations and contexts, which also can change over time. Therefore, it is important not to rely on results which have become dated.

## Interpretation

Personality traits are best interpreted on a continuum. Low scores and high scores are neither inherently good nor bad. Both low and high scores have beneficial and undesirable implications for behavior. While scores reflect a likelihood of displaying certain behaviors, remember it is possible to compensate for improvement opportunities through development, experience and coaching.

Interpretation of personality scores requires a comparison to others. In this report, the scores for each Aspect are communicated on a standardized nine-point scale called a stanine. As illustrated below, most people will tend to fall toward the middle of the stanine continuum on many Aspects, but will likely have higher or lower scores for some Aspects.

Each of the fifteen Aspects is presented with a single, short description, along with descriptions at each end of the continuum. The darker box on the graph represents your exact stanine and the lighter boxes to either side indicate the possible range of your score. For example, the graph below indicates a stanine of 2 and a possible range of scores of 1 to 3.

2

Aspect: A short aspect description

To interpret your results, start by reviewing your overall Styles. Then proceed to the detail for each of the Aspects that constitute those Styles.

## **Model of Personality**

The Personality Model used as a foundation for this assessment is firmly grounded in the well-established and empirically supported Five Factor Model (at times referred to as the Big Five). Elements of each of the traditional concepts of Extroversion, Emotional Stability, Agreeableness, Conscientiousness, and Openness to Experience are directly represented across ten of the fifteen Aspects of the model. The remaining five Aspects reflect traits critical for successful professional performance, particularly in leadership roles, but not captured in the traditional Five Factor Model. These additional five Aspects were taken from the latest literature on authentic leadership, learning theories, and positive psychology.

## **Normative Group**

The selection of an appropriate normative group is important for accurate interpretation of personality results. The choice of which is based on a number of factors including cultural elements and the intended use of the report. This report is based on Professionals and Managers in the U.S. As physicians occupy a space in the top tiers of the health care hierarchy, it is important to explore individual student potential, as well as behaviors, from this perspective.

## **American Medical Student Association**

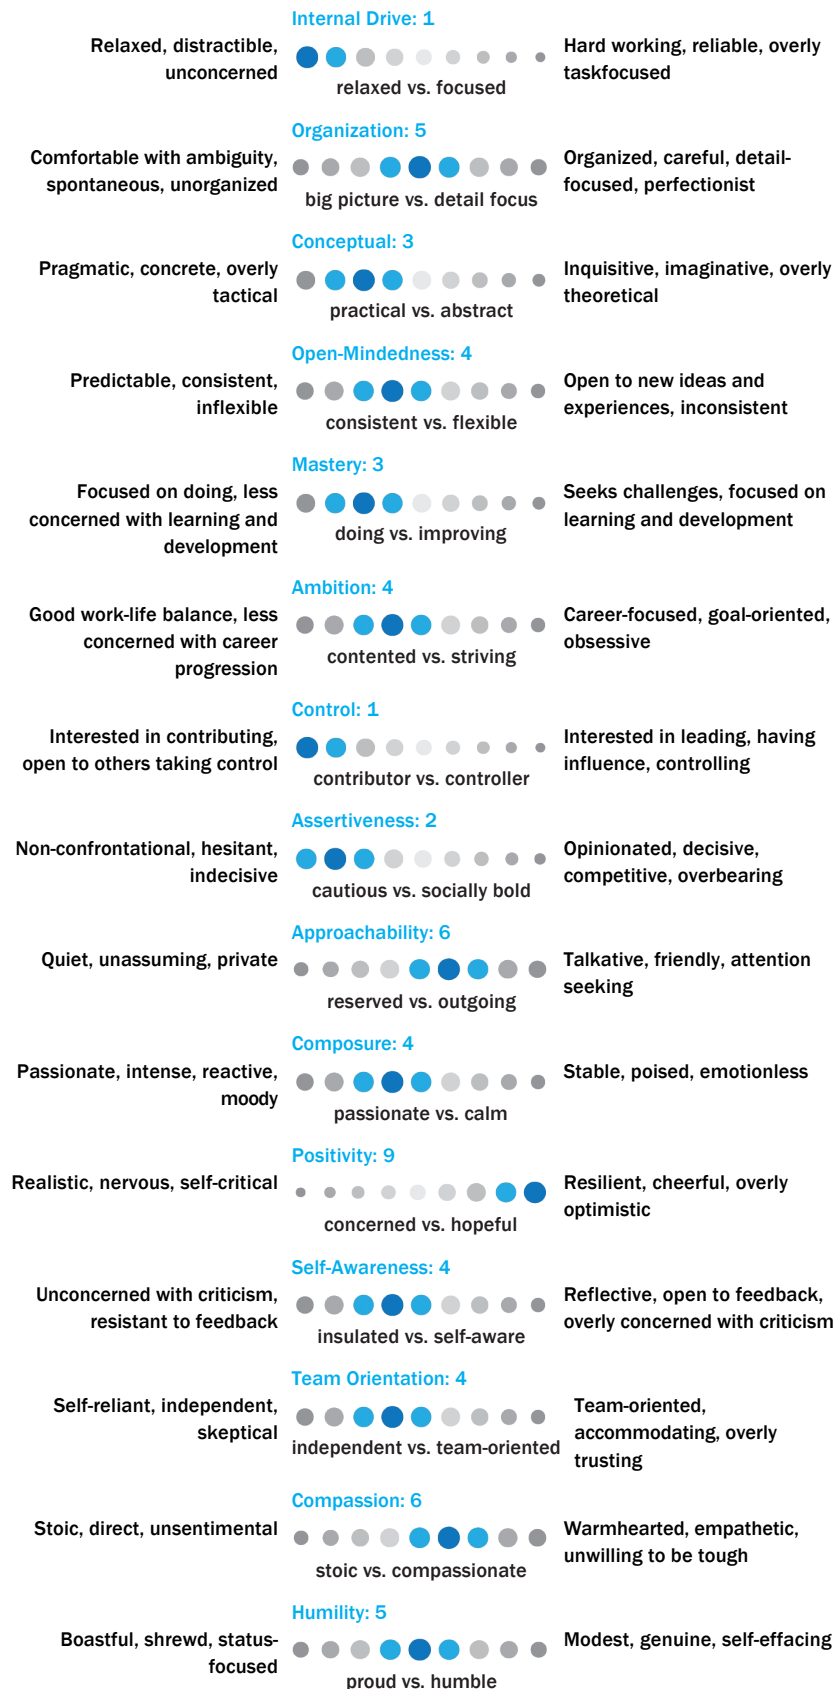

AMSA is a student-governed, national organization committed to representing the concerns of physicians-in-training. AMSA members are medical students, premedical students, interns, residents and practicing physicians. Founded in 1950, AMSA continues its commitment to improving medical training and the nation's health. This self-awareness assessment represents one part of AMSA's commitment to assisting future physicians realize their full potential and grow their skill sets in areas not typically addressed in medical schools. The assessment is specifically focused on traits critical for medical students, and is but one tool offered by AMSA to assist physicians-in-training in their professional development and well-being.

# Aspect Summary

## Aspect Profile

Stanine scores on each of the fifteen Aspects of personality are summarized in the table below.

# Task Style

3.0

## Summary

The Task Style is a broad measure of conscientiousness capturing one's approach to duties, responsibilities, and getting things done. Your results on Internal Drive suggest a comfort in moving from task to task and a more relaxed approach to work. When combined with a lower Organization score, task completion may be at risk as your tendency to leave some tasks unfinished may not be effectively checked and balanced. A high degree of Organization may suggest a healthy preference toward planning and organization which may help ensure tasks are completed.

1

## Internal Drive: relaxed vs. focused

Relaxed, distractible,  
unconcerned

Hard working, reliable,  
overly task-focused

People who fall within this range of the Internal Drive scale may be seen as:

- Laid back and at ease
- Able to move from task to task but likely to leave some unfinished
- Less concerned with meeting deadlines, sees them as more flexible
- Less likely to focus on a single task for extended periods, may get distracted
- Likely to procrastinate
- More likely to engage in familiar tasks rather than working through challenges

5

## Organization: big picture vs. detail focus

Comfortable with ambiguity,  
spontaneous, unorganized

Organized, careful, detail-  
focused, perfectionist

People who fall within this range of the Organization scale may be seen as:

- Equally mindful of specifications and purpose
- Able to adopt a methodical and planful approach to tasks when necessary
- Generally orderly except when overwhelmed
- Willing to break rules when surrounded by others who are doing so
- Constructs methodical blueprints for projects but may deviate from agenda
- Occasionally missing some critical details in their work

# Adaptation Style

## 3.3

### Summary

Adaptation Style relates to a person's openness to experience and approach to learning and adapting to situations. Your results suggest a tendency toward a pragmatic approach to problem solving rather than a more theoretical approach. A lower Open-Mindedness score may also indicate a high degree of consistency in your behaviors but also suggests you may be less willing to consider new ideas. A higher Open-Mindedness score suggests you can be too willing to try different approaches without considering their long-term implications. Finally, consider the impact of Mastery and how this influences how you prefer to adapt to situations.

## 3

### Conceptual: practical vs. abstract

Pragmatic, concrete, overly tactical

Inquisitive, imaginative, overly theoretical

People who fall within this range of the Conceptual scale may be seen as:

- Very pragmatic in their approach to things
