Introduction

Purpose

This report is designed to provide insight into your preferences, attitudes and personal characteristics, and how they relate to your behavior, primarily in professional settings. It is organized around six Styles and fifteen Aspects of personality. Each Style and Aspect provides insight into your approaches as assessed by AMSA's Self-Awareness Assessment Instrument. Each of the Styles and their Aspects, along with your results and the implications of your scores, are described in greater detail below.

Cautions

Your results should be considered in the context of other available information. It is important not to over-emphasize any one specific statement or conclusion. When examining the report, consider the pattern of strengths and improvement opportunities across the personality Aspects presented, and review feedback you have received from other sources. Although individual personality tends to be relatively static and stable across an individual's lifespan, certain identified Aspects of personality can vary and shift over time for a variety of reasons. In addition, the display of specific behaviors in professional settings is also a function of situations and contexts, which also can change over time. Therefore, it is important not to rely on results which have become dated.

Interpretation

Personality traits are best interpreted on a continuum. Low scores and high scores are neither inherently good nor bad. Both low and high scores have beneficial and undesirable implications for behavior. While scores reflect a likelihood of displaying certain behaviors, remember it is possible to compensate for improvement opportunities through development, experience and coaching.

Interpretation of personality scores requires a comparison to others. In this report, the scores for each Aspect are communicated on a standardized nine-point scale called a stanine. As illustrated below, most people will tend to fall toward the middle of the stanine continuum on many Aspects, but will likely have higher or lower scores for some Aspects.

Each of the fifteen Aspects is presented with a single, short description, along with descriptions at each end of the continuum. The darker box on the graph represents your exact stanine and the lighter boxes to either side indicate the possible range of your score. For example, the graph below indicates a stanine of 2 and a possible range of scores of 1 to 3.

Aspect: A short aspect description

A description of one end of the spectrum

To interpret your results, start by reviewing your overall Styles. Then proceed to the detail for each of the Aspects that constitute those Styles.

Model of Personality

The Personality Model used as a foundation for this assessment is firmly grounded in the well-established and empirically supported Five Factor Model (at times referred to as the Big Five). Elements of each of the traditional concepts of Extroversion, Emotional Stability, Agreeableness, Consciousness, and Openness to Experience are directly represented across ten of the fifteen Aspects of the model. The remaining five Aspects reflect traits critical for successful professional performance, particularly in leadership roles, but not captured in the traditional Five Factor Model. These additional five Aspects were taken from the latest literature on authentic leadership, learning theories, and positive psychology.

Normative Group

The selection of an appropriate normative group is important for accurate interpretation of personality results. The choice of which is based on a number of factors including cultural elements and the intended use of the report. This report is based on Professionals and Managers in the U.S. As physicians occupy a space in the top tiers of the health care hierarchy, it is important to explore individual student potential, as well as behaviors, from this perspective.

American Medical Student Association

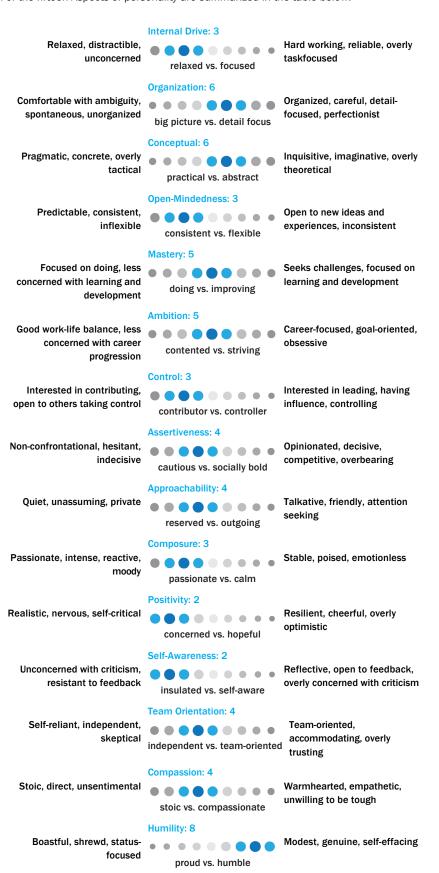

AMSA is a student-governed, national organization committed to representing the concerns of physicians-in-training. AMSA members are medical students, premedical students, interns, residents and practicing physicians. Founded in 1950, AMSA continues its commitment to improving medical training and the nation's health. This self-awareness assessment represents one part of AMSA's commitment to assisting future physicians realize their full potential and grow their skill sets in areas not typically addressed in medical schools. The assessment is specifically focused on traits critical for medical students, and is but one tool offered by AMSA to assist physicians-in-training in their professional development and well-being.

Aspect Summary

Aspect Profile

Stanine scores on each of the fifteen Aspects of personality are summarized in the table below.

Task Style

Summary

The Task Style is a broad measure of conscientiousness capturing one's approach to duties, responsibilities, and getting things done. Your results on Internal Drive suggest a comfort in moving from task to task and a more relaxed approach to work. When combined with a lower Organization score, task completion may be at risk as your tendency to leave some tasks unfinished may not be effectively checked and balanced. A high degree of Organization may suggest a healthy preference toward planning and organization which may help ensure tasks are completed.

3

Internal Drive: relaxed vs. focused

Relaxed, distractible, unconcerned

Hard working, reliable, overly task-focused

People who fall within this range of the Internal Drive scale may be seen as:

- · Easy going and relaxed
- · Able to shift between tasks but may leave some incomplete
- May dismiss project timelines, seeing them as adjustable
- Likely to get diverted during extensive tasks
- Likely to put off or deter from tasks
- Less interested in difficult tasks that require perseverance

6

Organization: big picture vs. detail focus

Comfortable with ambiguity, spontaneous, unorganized

Organized, careful, detailfocused, perfectionist

People who fall within this range of the Organization scale may be seen as:

- Equally mindful of specifications and purpose
- Skillful in using systematic and calculated methods to accomplish assignments
- Preferring to be organized, but tending to be less so during stressful periods
- Easily succumbs to peer pressure even if it involves deviant behavior
- Developing structured plans, but not always sticking to them
- Occasionally missing some critical details in their work

Adaptation Style

Summary

Adaptation Style relates to a person's openness to experience and approach to learning and adapting to situations. Your results suggest you are likely to take a balanced approach between tested and traditional approaches and new, more creative ones. As such, consider carefully how your degree of Mastery may impact whether you are tactically focused on getting things done at the expense of identifying new ways of doing things and process improvements.

Conceptual: practical vs. abstract

Pragmatic, concrete, overly tactical

People who fall within this range of the Conceptual scale may be seen as:

- Intellectually interested and creative within their areas of expertise
- · Perceiving society as forthright yet willing to take into account multifaceted viewpoints
- Opting for strategic methods, yet receptive to reviewing apprehensions
- Able to come up with novel solutions to common or familiar problems; less likely to innovate around broader or more ambiguous problems
- Less interested in theoretical or abstract ideas that lack practical application

Open-mindedness: consistent vs. flexible

Predictable, consistent, inflexible

People who fall within this range of the Open-Mindedness scale may be seen as:

- . Unwavering in opinions and beliefs
- Very predictable and consistent
- · Always using trusted approaches
- Comfortable with routine; likely to refute change
- · Unadaptable and set in ways
- · Resistant to change

5

Mastery: doing vs. improving

Focused on doing, less concerned with learning and development

Seeks challenges, focused on learning and development

People who fall within this range of the Mastery scale may be seen as:

- Opting to enhance present qualities, yet ready to acquire new ones too
- Believing that peoples' abilities are difficult to change, but some skills can be developed through hard work, training, and education
- Interested in helping talented individuals learn and develop
- More interested in personal development when there is potential for reward
- Hesitant to test arduous options when there is a great potential of disappointment

Achievement Style

Summary

Need for achievement, including focus on career goals and influence over others is captured by Achievement Style. Your results suggest likelihood to balance personal goals and career goals, allowing, at times, others to take on authority and responsibility that may be best handled by you. While others are likely to view you as a team player, be mindful you do not miss opportunities take on new roles and responsibilities that would be valuable to your career.

Ambition: contented vs. striving

Good work-life balance, less concerned with career progression

People who fall within this range of the Ambition scale may be seen as:

- High appraisal of work-life equalization
- Intrigued by advancements and accomplishing vocation objectives, however hesitant to relinquish individual objectives to accomplish them
- Motivated to achieve good results, however not stressed over being exceptional
- Leaning toward an equalization of both achievable and arduous goals
- Generally holding themselves and others to high standards, although willing to compromise
 at times

Control: contributor vs. controller

Interested in contributing, open to others taking control

Interested in leading, having influence, controlling

People who fall within this range of the Control scale may be seen as:

- Good team players
- Preferring to lead by example rather than through direct authority and responsibility
- · Willing to accept guidance from others
- More comfortable as an individual contributor than as a leader or manager
- Averse to making difficult decisions with broad implications at work
- Hesitant to advise others what to do and consider them responsible

Interaction Style

Summary

Interaction Style is a broad measure of extraversion that describes how much you seek out interaction with others and how you prefer to engage with them. Your results suggest you enjoy sharing and debating your opinions, as long as the conversation doesn't become too adversarial. Further, you may be gregarious at times, especially with people you know well, as long as the conversation stays light and enjoyable and avoids topics where people strongly disagree with each other.

Assertiveness: cautious vs. socially bold

Non-confrontational, hesitant, indecisive

People who fall within this range of the Assertiveness scale may be seen as:

- Comfortable imparting insights they feel unequivocally about
- Enjoying competition and debate as long as it does not get confrontational
- Willing to shift suppositions or choices if emphatically tested
- Some of the time hesitant to test others' standpoints or express contradiction, yet for the most part ready to do as such when essential
- Somewhat uncomfortable advocating for unpopular opinions or decisions

Approachability: reserved vs. outgoing

Quiet, unassuming, private

People who fall within this range of the Approachability scale may be seen as:

- Ordinarily extroverted in social circumstances
- Enthusiastic or even silly at times, but more serious at others
- . Comfortable working independently, but also enjoys social interaction at work
- Preferring not to be the center of attention in many situations, but enjoying it occasionally
- Socially comfortable about most circumstances however once in a while more held when collaborating with acquaintances

Emotional Style

Summary

Emotional Style describes how you experience and react to feelings and your degree of self-awareness. Your results suggest you tend to experience feelings intensely and can become apprehensive in stressful situations; however, you listen to feedback and are attuned to others' emotional states. A lower Positivity score would suggest you tend to expect the worst when facing stress. A higher Positivity score would suggest that while you can be reactive, you tend to believe things will work out well in the long run. You should consider how your degree of Awareness may help or hinder your approach to intense or frustrating situations.

3

Self-Control: passionate vs. calm

Passionate, intense, reactive, moody

Stable, poised, emotionless

People who fall within this range of the Self-Control scale may be seen as:

- Transparently showing enthusiasm, fervor, and vigor
- · Accessible, simple to peruse, and in contact with sentiments and feelings
- Short-tempered and irritable
- · Effortlessly irritated or annoyed
- Tense, reactive, and unpredictable under stress

2

Positivity: concerned vs. hopeful

Realistic, nervous, selfcritical

Resilient, cheerful, overly optimistic

People who fall within this range of the Positivity scale may be seen as:

- Rigorously assessing circumstances and mindful of potential issues
- · Realistic or conservative when making promises
- Earnest and solemn, ready for the most exceedingly terrible
- Self-critical, worried about making mistakes, eager to perform well
- Anxious, pessimistic, and overly focused on what could go wrong

2

Self-Awareness: insulated vs. self-aware

Unconcerned with criticism, resistant to feedback

Reflective, open to feedback, overly concerned with criticism

People who fall within this range of the Self-Awareness scale may be seen as:

- · Willing to act free from concerns about what others think
- Protected against unreasonable or off base feedback
- Places low value and regularly disregards input
- Not regularly weighing how their conduct and choices sway others
- · Possessing little insight of individual qualities and shortcomings

Teamwork Style

Summary

Teamwork Style is a broad assessment of agreeableness that describes how you approach relationships and how focused you are on the needs of others versus your own needs. Your results suggest that you are generally willing to accommodate requests in an attempt to build relationships with others because you are understanding, even with people you don't fully trust. You should, however, consider how your degree of Humility may help or hinder your relationships with coworkers and how they perceive you.

Team Orientation: independent vs. team-oriented

Self-reliant, independent, skeptical

People who fall within this range of the Team Orientation scale may be seen as:

- Inclined to assist others if vital for the group's prosperity
- By and large confident of individuals, yet to some degree wary at first
- Open to asking others for help, but generally trying to avoid it if possible
- Willing to accommodate others, but sometimes impatient, disagreeable, or uncooperative when busy or under stress

Compassion: stoic vs. compassionate

Stoic, direct, unsentimental

People who fall within this range of the Compassion scale may be seen as:

- Generally kind and forgiving toward people they know well
- Mindful of the sentimental side of circumstances, however not excessively impacted by it
- Unsympathetic to disasters saw to be brought on by poor choices
- Tolerant of others' disparities and shortcomings, however less so under pressure
- Able to give troublesome input notwithstanding when to some degree uncomfortable

8

Humility: proud vs. humble

Boastful, shrewd, statusfocused

People who fall within this range of the Humility scale may be seen as:

- Truthful, open, and genuine with others
- Very modest and hesitant to take personal credit for success
- Not very motivated by achieving social status
- Uncomfortable engaging in political maneuvering
- Less compelling in promoting for own imperatives
